## Hey SeaDevils!

Last month's DEW Scuba was one of the best yet, by every measure. We had some 26 people in attendance "veterans" and newcomers. **Steve Barnett** from **Divers Alert Network** made an excellent presentation. And very generous SeaDevils raised \$120 to benefit DAN.

Thanks to **Awful Arthur's** for their donation and to **UNEXSO** and **Jim & Laura Voskovitch** who donated a four boat dive package at UNEXSO in Freeport! **Joe Elder** is one lucky guy!

There was a lot of diving going on this past month. I was lucky to be invited to accompany **Ed Clark** to Alaska! We enjoyed two great days of diving as the guests of **Craig Sempert** of Craig's Dive Center in Craig, Alaska.

The richness of the sealife in the northwest is spectacular! Giant anemones, sea stars, sea cucumbers, crabs, plume worms, neat fish ... gunnels, skulpins, cabezons, .... The list is endless. We saw humpbacks at the surface and missed the hoped for seals, but no regrets. The life is a diverse and as colorful as anywhere. It's like the beauty of the fall with deep oranges, red and rust brown. We're looking forward to going back next September. There's room available but don't forget your dry suit! (Actually a balmy 50 degrees)

**Tony Feldmesser** and **Mike Marks** went to Rawlings for a great day of diving. Congratulations to **Bethany Marshall** for completing her Open Water. **Dicky Owen**, **Kim Morgan** and **Jane Owen** gave up the chance to visit Rawlings but have opted to complete their dives in beautiful Grand Cayman.

**Nick Laiacona** and **Allen Graves** (a NAUI DM working to achieve a PADI rating as well) worked on their Divemaster certification while at Rawlings. Just a little bit more to do guys! ...and of course their was **Frank Hale**. You just can't keep him away from any body of water!

**Frank Hale**, **Nick Laiacona**, and **Don Knight** finished their Nitrox certification down in Bluestone while **Nickie Knight**, **Monica Addleman** and **Kip Germschied**

completed Open Water Dives. **Monica** and **Kip** then bolted for Florida for several days of diving.

The Morehead City trip got blown out, but **Joe Marcincio**, **Beth Summers** and **Joe Elder** say they will just schedule another one. **Allen Graves**, **Maria Salazar**, **Frank Hale** and **Tom Moore** have combined to start a real one day weekend trip to Rawlings with others like **John Morgan** just missing out with too much work!

Then there is the **Freeport Gang!** I had a great group of people with me to initiate into the club. **Suzanne Staton**, **Robin Amato**, **Bill & Karen Wortman** with their daughters, **Megan & Laura**, **Ed Clark** and ... (drum roll please) ... **Frank Hale!** Poor **Tammy**

**Johnson** came down sick and couldn't make it! We'll make it up to you girl!

I had hoped that we would be able to schedule regular weekly dive trips starting next summer and that's ambition that seems to be on track thanks to many great people. I've talked to **Allen Graves**, **Frank Hale**, **Mike** and **Tony** and **Joe** and I believe it is feasible to coordinate impromptu trips starting immediately barring bad weather and the holidays.

So, effective immediately, if you want to do a little diving locally, plan on a trip leaving every weekend from **DIVE Connections** which will be open to help us get on our way and to help us coordinate. So call 964-9200 and ask what the schedule is for the coming weekend. Also you might like to send us your email address and we'll put you on the local dive blast list.

This month's DEW Scuba features **Lynn Samuel** of **University Dive Center!** For those of you who saw her pictures last time, get ready for the sequel! Beautiful pictures and interesting stories of Caribbean reef life! Don't miss it and tell all your friends!

Whew! That was a lot to try to squeeze into one page! I'm sure there will be more news and fun times at **Awful's**, so see you at DEW Scuba ... and keep going diving!  
--Chip

## “We Go Diving!”

**December 10-16, '98:**

**Providenciales, Turks & Caicos** -

Tony Feldmesser will be running a trip to Provo with it's terrific wall diving.

Dive with Art Pickering's Turtle Divers at Turtle

Cove and hotel accommodations at the Erebus Inn. Give Tony a call at 975-1959 or use email: [Scuba@SeaDevilDivers.com](mailto:Scuba@SeaDevilDivers.com)

**January '99: Florida Springs Anyone?** – Winter with a Manatee. Call Tony for details. 975-1959  
[Scuba@SeaDevilDivers.com](mailto:Scuba@SeaDevilDivers.com)

**February '99: Little Cayman** - Enjoy a full week of diving one of the finest wall and reefs anywhere. Great food and accommodations and Little Cayman Beach Resort, 3 boat dives per day. Contact Chip Earle: [Scuba@SeaDevilDivers.com](mailto:Scuba@SeaDevilDivers.com)

**April 22-26, '99: Freeport, Grand Bahama** - Shake off the winter blahs with three days of diving and a day of sun on the beach. Airfare from Richmond, Accommodations and 9 Boat Dives! Open Water Certification Dives and Advanced Open Water course available. \$837 Air, Transfers, Hotel & 9 dives.

**May '99 – Costa Rica** - The dates and other details are being negotiated, but Ed Clark is working on a special trip with the opportunity to not only dive but visit some very special wildlife facilities. Stay tuned!

**August 19-23, '99: Freeport, Grand Bahama** – A special opportunity to get certified in warm, captivating waters. Price will include either 9 dives for certified divers or 6 dives and rental equipment for non-certified divers. It's better in the Bahamas!

**September '99: Craig, Alaska!!** – You won't believe it! Grab your dry suit. 50F water and some of the richest sealife anywhere! And the best and freshest seafood (you catch it yourself!) Halibut, Scallops, etc. Ooooo Boy!

## Dive Any Weekend!

Come dive with  
**SeaDevil Divers**

Bluestone  
Lake Rawlings  
Fantasy Lake  
Fishersville

Trips leave from  
**DIVE Connections**  
Saturday and/or Sunday  
mornings. Trip details vary so  
please call 964-9200 for details  
or email: [Scuba@SeaDevilDivers.com](mailto:Scuba@SeaDevilDivers.com)

**Convenient, Affordable and  
Professionally Run**

### Pool Diving All Winter!

Any Tuesday or Thursday Evening  
7PM  
Best Facilities in Town!  
ACAC and DIVE Connections

\$20 Includes pool time and air  
Reservations Please ..... 964-9200

## Did you know that Turtle Grass has flowers?

And there is much more interesting stuff to learn to enhance your next dive trip!

### **Bahamian Ecology (BIO 198-01)**

Offered at PVCC beginning February 8.  
Tuesday evening from 5 pm - 6:50 pm.  
One-hour credit.

A sailing and snorkeling trip in the Bahamas, May 8-15, is open to those who complete the lecture series.

The lecture series introduces students to the ecology and natural history of tropical habitats. Special emphasis is placed on marine ecology: types of organisms, behavior, community structure, and underwater habitats.

Lectures include color slides, videos, and CD-ROM presentations. This series is recommended to all those interested in learning about new ecosystems, or increasing their knowledge about familiar places!

There is no final exam; weekly assignments relating to each topic are required.

For more information contact:

John Walsh (961- 5368), or  
Norma Diehl (961 - 5233)

## 17<sup>th</sup> Century Fleet Found 50 Miles from Bonaire!

*Allen B. Graves*

Las Aves, Venezuela

Explorers have found a fleet of French Warships that sank in a skirmish three centuries ago, including what appears to be only the second and third pirate ships ever discovered.

The nine wrecks found about 50 miles southeast of Bonaire on the Las Aves Islands are the remnants of a whole fleet whose demise changed the course of history in the Caribbean. Divers found the fleet's majestic 70-gun 500-man flagship, The Terrible, featuring an 18-foot anchor with a ring large enough for a diver to swim through. Coral encrusted pistols, rifles and swords were discovered near coins stacked like poker chips. Rare bronze cannons and cannon shots the size of bowling balls were also found.

Up to 18 ships sank, 500 men drowned and another 1,000 died of starvation and disease while marooned on bug-infested Las Aves. The French rescued 1,500 men three months later.

Local fishermen and divers have long seen bits of the wrecks over the years, but this was the first extensive scientific effort to locate and identify all the ships. The explorers plan to lobby Venezuela's government to declare the area a protected underwater museum.

## Web Users Can Track Rehabilitated Sea Turtle

Courtesy Sea Turtle Survival League

A threatened loggerhead sea turtle that was rehabilitated by researchers after she was found hypothermic on a Delaware beach has been released to the wild off Assateague

Island. "Perdida" is carrying a satellite transmitter that will allow the public to monitor her migration on the Internet.

By studying the movements of this particular turtle, researchers with the Sea Turtle Survival League and the U.S. Army Corps of Engineers hope to learn more about the areas used by sea turtles to feed and forage along the East Coast. Sea turtles are very global, very migratory. They utilize habitat in many locations. The researchers don't know where Perdida will go, but it is likely she will head south, down the coast to Florida where there are known sea turtle feeding areas. She is one of more than 20 sea turtles being actively monitored by the program.

## Threatened Loggerheads Sustain Delicate Dunes

The University of Florida is performing research on the affects of sand dunes by Loggerheads.

Eggs laid by loggerheads hold essential nutrients that may strengthen vegetation along the shore and could be preserving the dune system. Nesting beaches typically are nutrient poor because sandy soils don't retain nutrients and salt spray can limit vegetation growth. Sea turtles nest along the East Coast from Florida up into the Carolinas. Melbourne Beach has one of the largest loggerhead nesting colonies in the world and the densest nesting along the East Coast. The sea turtles climb up onto the beach and dig a hole in the sand between eight to 18 inches deep, and lay their eggs. Then they return to the sea, and never come back to tend the nest. About 50 days after the eggs are laid, the hatchlings emerge -- at night to avoid predators -- and head for the sea en masse. Turtles nest on average every few years with each turtle laying several clutches, or nests. Each year, about 65,000 nests are laid along Florida's beaches.

The sea turtles laying the eggs have sometimes traveled from as far as 1,500 miles away. They bring the nutrients from their feeding grounds -- the Bahamas, Cuba, the Dominican Republic, the Florida Keys and other locations along the Eastern Seaboard -- to the nesting beach.

Dunes naturally receive nourishment from rain water, algae tossed up by waves and terrestrial animals from behind the dune system that wander across the sand. But sea turtles provide a much greater quantity of nutrients to the dune system than these other sources.

## Report Focuses on Aquaculture's Problems

A report by a group of 10 international researchers suggests that some types of aquaculture, a fish-farming concept that once seemed to be the solution to overfishing of the world's oceans, may in fact be causing some of the same problems it was meant to resolve.

Shrimp and salmon aquaculture, in particular, were indicted for depleting fisheries, disrupting coastal ecosystems, polluting the ocean with excess nutrients and pesticides, and using almost triple the quantity of wild-caught fish for "fish food" as the system produces in marketable shrimp or salmon.

According to the report, some of the worst problems with aquaculture develop with species such as shrimp and salmon that are carnivores and require high levels of fish meal and fish oil in their diets. Instead of becoming a substitute for ocean fishing, they actually draw down the ocean resources that support all fish production, the report said.

Global aquaculture now accounts for one-fourth of all fish consumed by humans. Almost half of the salmon and nearly one fourth of the shrimp consumed worldwide now comes from farms.

## Florida's Reefs Battered By Man, Nature

Sanctuary scientists are trying to assess what impact Hurricane Georges had on the reef ecosystems.

The Florida Keys National Marine Sanctuary scientists are conducting scoping meetings on a no-take area in the Tortugas and trying to assess what kind of damage Hurricane Georges wreaked when it passed through in September.

The reef system in the Keys has been suffering from two manmade problems -- overfishing and pollution. To combat the problems brought on by overfishing, the sanctuary has devised a plan, known as Tortugas 2000, to

Courtesy Department of the Interior

establish a no-take zone. In July 1997, NOAA created several no-take zones in an attempt to determine whether nature can replenish itself in a small section of the sanctuary. Nothing can be removed -- neither plant nor animal -- within a no-take zone, although divers are still free to dive.

The results thus far have been extremely promising. The fish are getting bigger, the ocean floor is relatively uncluttered and various forms of sea life are reaching breeding age. Scoping meetings, in which public comment was sought on where the sanctuary borders should be, were fairly well attended and the input provided by divers and fishermen was extremely useful.

Scientists are reporting that the storm's impact is mixed; in some areas it helped, and in some areas huge coral heads were tumbled and broken." The hurricane's 90-115 mph winds and 7-9 foot storm surge swept through the Western Sambos Ecological Reserve near Key West. In its path, Georges left broken and toppled sea fans and elkhorn corals that are now scattered. Throughout the lower Keys reefs, massive amounts of sediment and rubble were cleared from grooves between the coral spurs and deposited on the reef flat and back reef areas.

Weed racks that had built up along the eastern shorelines of some of the islands were completely washed ashore. While this flushing effect might not make homeowners happy, it's good for the reefs. Georges also blasted off black band disease that threatened thriving colonies in some areas of the reef.

The Keys have also suffered back-to-back coral bleaching events. However, the stress of continued and serious water pollution problems and the destruction wrought by the storm, have put sanctuary researchers in a wait and see mode. Water temperatures, which trigger bleaching events, are back down, yet it's too early to tell what the mortality for this year will be.

## Florida Manatee Draw On Small Gene Pool

Out in the open ocean, a manatee -- the giant gentle vegetarian sea cow -- looks like an easy meal to predators -- big, slow and tasty. So Florida's manatees have made it a point to stick close to home, in coastal waters and rivers. But

their isolation, while protecting them from becoming a tasty meal for a shark has also lead to dangerously low genetic diversity.

University of Florida researchers collected blood, skin and tissue samples from manatees in Florida, South

and Central America, Mexico and the Caribbean. By looking at the genetic traits of the different manatees, biologists now believe a small number of Caribbean sea cows colonized Florida waters in the last 10,000 years. With only a few ancestors to start with, today's manatees could face inbreeding problems, making it harder for the species to cope.

"What we've learned is the Florida manatee is genetically unique, and that it's isolated from manatees elsewhere in the Caribbean and the Yucatan," said Brian Bowen, a conservation geneticist with the University of Florida Institute of Food and Agricultural Sciences. "Because of their low genetic diversity, it causes concern but not alarm."

## Preparing Medically for a Dive Trip [Rodales]

Review your medical condition, especially for weight gain and new medications. Changes in either can affect your diving. If you've been inactive for a while, it's time to think about improving your cardiovascular fitness. Otherwise you could arrive at the resort or live-aboard and discover you can't make all the dives you planned to do. If you suspect any medical condition could affect your diving, see a doctor before traveling.

For tips on staying healthy once you've reached your destination, check out How to Travel Disease-Free on the internet at Rodale's web site [www.scubadiving.com](http://www.scubadiving.com)

Before you start packing, pick up the phone or fire up the PC and contact the Centers for Disease Control Travel Health Hotline at (404) 639-2572 or on the web. The CDC has loads of current information on the diseases in the region or country you'll be visiting. They also recommend vaccines and medications to help you prevent illness. Similar information is also available at Travel Health On-Line, a private web site found at [tripprep.com](http://tripprep.com).

Armed with the knowledge of what diseases you're likely to face, see your doctor for a routine physical and help obtaining the proper vaccines and medications. Look for clinics affiliated with the International Society of Travel Medicine (ISTM). For a list of ISTM clinics, call (770) 736-7060 or on the web at [www.istm.org/clinidir.html](http://www.istm.org/clinidir.html).

Don't wait until the last minute to seek this medical advice. Full immunization may require multiple doses, over days or even months. Make sure your childhood vaccinations are current, regardless of where you plan to travel. Specifically, check your immunization status for: Tetanus, Measles/Mumps/ Rubella, Polio, Typhoid, and Hepatitis A & B (a new vaccine for Hepatitis called Havrix has replaced the old immune globulin vaccine protocol and is highly recommended for dive travelers.)

No vaccine or medication is 100 percent effective, so it's important to understand how diseases are transmitted in

order to limit your exposure. For divers, the most common are; Contaminated Food & Water, Insect Bites and Water-Borne Parasites.

Many parasites may not make you sick until weeks or even months after initial infection. They may give you some symptoms--fever, rash, stomach problems--and then go into hibernation for years. That's why it's important to pay particular attention to any illnesses that you may have after traveling. Seek medical help if you have any unexplained symptoms within six months of travel, and be sure to tell your doctor where you've been traveling.

## River Training

We stand on the bank, looking down. We have just walked the length of the rapids we are about to enter. Boulders create huge pillows and crushing hydraulics--there will be no mercy on this ride. The spring melt in the Appalachians assures there will be plenty of water and that it will be very, very cold.

The instructors enter first, and with great effort strategically place themselves to be able to help if needed. Slowly we wade in with only wet suits, booties, helmet and PFD (personal flotation device). We are to face these rapids. We have to be able to save others, so into the rapids we first must go.

Individually we leave the bank, swimming strongly and angling upstream, so that the force of the water brings us in line with the first chute. Once the current catches your body, any effort is useless. Now you must ride. Feet first, ankles and arms crossed, you go where the river takes you. A monstrous wave looms ahead; created by a huge underwater boulder. Even if you don't hit the boulder, you will definitely get pummeled by the wave. And whatever you do...keep moving ...don't fold up or turn over, or you will get caught in an equally monstrous hydraulic. Surviving this, the river whips you to the left through a series of downstream chutes, each complete with pillow rocks, hydraulics and occasionally, an eddy.

And this is only the beginning of the training for the SVRS Water Rescue Team members! Come join us!

Tammy Johnson  
Scottsville Volunteer Rescue Squad

# SeaDevil DIVERS

## Class Schedule

**PADI Open Water Scuba Diver:** This entry level program is designed to develop a competent recreational diver. The program consists of classroom and 5 pool dives after which certification is awarded upon completing 4 supervised Open Water dives. These dives are usually done on the weekend at one of the local quarries or on one of our Caribbean dive trips. Referrals to other PADI resort dive destinations are available. The program costs \$300 and includes all course materials, pool dives, equipment rental and certification fees. The cost of the Open Water dives depends, of course, on where they are done. Students need to provide mask, fins, and snorkel.

**We Promise...You'll  
Get Hooked**

Class begins:

Weeknight	Weekend
<b>December 1<sup>st</sup></b>	<b>January 22<sup>nd</sup></b>
<b>January 5<sup>th</sup></b>	<b>February 19<sup>th</sup></b>
<b>February 2<sup>nd</sup></b>	

Open Water Dive Weekends:

You need it we'll get it done! Want to go the islands? Aim for Freeport April 22<sup>nd</sup> and we'll also be happy to refer you to another PADI instructor. We'll even help you make all the travel arrangements.

**PADI Advanced Open Water:** This class provides a sampler of five specialty areas of diving: Navigation, Deep, Night, Naturalist, Peak Buoyancy, Multilevel, Search & Recovery, Photography, etc.

**December 10-16<sup>th</sup> – Provo, Turks & Caicos**  
**April 22-26<sup>th</sup> - Freeport, Grand Bahama**

**PADI Medic First Aid:** A very good all around first aid course including CPR with particular emphasis on diving related injuries.

**PADI Rescue Diver:** Instructs the student on how to handle and assist in handling dive emergency situations

**PADI Divemaster:** Full professional qualification with the world's largest certification agency. Please call for more information. Begin the self-study portion today!

*Private & semi-private lessons with flexible schedules are available for most courses.*

## Dive Community Club Notes

Congratulations to **Kim Morgan, Nicole Knight, Kip Germscheid, and Monica Addleman** who are now fully certified divers! ....and congratulations too to **Bennie Melampy, Brooke Melampy, Pam Gibson, and Janie Owen** for completing the pool and academic portion of the class. Good luck and much success in you diving career.

October has been a very busy month, particularly in the aquatic section of the club. Our scuba program continue to expand, our water aerobics, life guard training, swimming classes are all doing well. So stop by and visit. If you are interested learning to dive, increasing your proficiency or going diving with other ACAC divers, please call the ACAC desk at 978-3800 or Chris Pettus – 964-9200

### The Boar's Head Sports Club

We are in the midst of a capital improvement program which when completed will see a new expanded pool facility. We are enthusiastic about the results of our scuba program this past summer and look to build with SeaDevil Divers over the winter.

We hope to be able to provide additional scuba related activities for our members and encourage our members to look to **SeaDevil Divers** for travel and diving opportunities.

Any questions about the scuba program and possible adventures with Boar's Head can be directed to Janet Hope at BHSC- 972-2235.

### Farmington Country Club

We have been working all summer on improvements for our members, including new dining facilities, sports club, enhanced tennis facilities and women's locker facilities, to name just a few.

Scuba has been an attractive experience for many of our members this past summer. Congratulation to all those who have participated. In the meantime a number of our members are planning diving trips and adventures this winter. For more information, contact Greg Slavin at FCC: 296-5661

### Scottsville Volunteer Rescue Squad

The SVRS Water Rescue Team (WRT) has had an exciting and busy summer! Under the leadership of **Tammy Johnson**, we have had multiple training exercises, put a number of divers through classes and seen a dramatic upgrade in equipment. We continually strive to improve so we can better serve our community. Our coverage area as a water rescue team includes all lakes, ponds, rivers and other bodies of water in

Albemarle and the surrounding counties. Our primary coverage area on the James River is from Gladstone to Bremono Bluff (roughly 40 miles); however, all the Water Rescue Teams in the area (Charlottesville-Albemarle Rescue, Lake Monticello Rescue and SVRS) have a mutual response agreement, and we will travel to wherever we might be requested. Most recently, we ran a recovery effort in Esmont with the help of CARS WRT. In this case, a 32-year-old female apparently slipped into a small pond on private property. The patient was reportedly not able to swim. Within minutes of the 911 call a police officer arrived on the scene but she was no longer visible. Dive operations recovered her within the hour but resuscitation was unsuccessful. In spite of the unfortunate outcome, we were pleased with the rapid response of the SVRS and CARS WRT's, the help of Albemarle County Police and Scottsville Fire Department, and the efficient team work at the scene.

<http://www.rlc.net/users/srs7/svrs7.htm>

### Lake Monticello Rescue Squad

Lake Monticello Volunteer Fire Department, Rescue Squad, and Water Rescue Team, Inc. recently held a Mass Casualty Incident Drill on 22 August 1998. The drill involved a boat wreck near the main beach with one boat sinking with two CPR dummies onboard (1 adult, 1 infant). The drowned mannequins were rescued from 20 ft of water within 20 minutes of the call out tone. An additional 23 injured patients were rescued from the water and transported within about 1 hour to the pretend hospital near the front of the Lake Monticello Owners Association Clubhouse.

The Lake Monticello Water Rescue Team (LMWRT) covers Fluvanna County and has mutual response agreements with Scottsville, Charlottesville, and Waynesboro dive or water rescue teams. We meet the second Wednesday of each month at 7:00 at the Lake Fire and Rescue Building.

If you are interested in joining the team as a diver, support person, boat operator, or instructor, or just to learn more about SAR diving come to the next meeting or contact Larry Turner (H) 589-3518 or (W) 980-7899.

### Murray High School

Gary Eisenhuth of Murray High School works with students at the school to introduce them to marine science. Gary is trying to expand the course to other area high schools. The course discusses such topics as geology, invertebrate biology, fish identification and behavior, sea grass, and coral reef ecology and involves a trip to Andros Island in the Bahamas for a little hands on training. We hope to be able to incorporate scuba training as well.

Anyone interested in assisting Gary in this endeavor, either physically or financially, is most welcome. Please give him a call at 540-672-3558.

"Club Notes" is a free service available to all local social and community organizations to announce happenings and activities of interest to the scuba community, to recognize member achievements or otherwise communicate with the diving community. Please email notices, articles, or requests to [Chip@SeaDevilDivers.com](mailto:Chip@SeaDevilDivers.com) or mail to:
